

Berief Test Centre

All part of the service for our customers

■ **Diestedde.** For many years, the Berief test centre has been playing an essential role in the company philosophy. Our customers often take advantage of the opportunity to see and test machines and plants of the product range from Berief and their cooperation partners in the Berief owned test centre on a surface of 700 m². This service has been used by a lot of customers from the food processing industry over the past 20 years. There is the possibility to test individual machines, to do extensive tests and to make performance tests on purchased and manufactured special machines. Steam generators and a thermal oil system are part of the energetic basic equipment of the test centre.

With regard to the tests and the realisation of the tests, our customers can profit from our experiences. The tests are mainly made with raw materials according to the specific

demands of our customers. If required, we are also able to purchase these raw materials and to store them in our own cooling and freezing facilities. From the delivery of the goods and the taking of samples up to the disposal of the products – we guarantee a trouble-free process. In this connection it is worth mentioning that the machines and plants are real production systems and no laboratory units which guarantees a realistic test of the equipment, and a later integration into the production process of the customer is facilitated. In order to meet with the market demands, we are offering furthermore a technological advice which can also be continued on site after the installation of the machine at the customer. We will always be prepared to arrange for a meeting together with you in order to facilitate the integration of our machines in your company with this service. ■
